OBJECTIVE

Full Stack Engineer with 1+ years of experience shipping production-grade e-commerce systems using React.js, Node.js, PostgreSQL, and AWS. Built and scaled a platform serving **15,000+ visitors**, reduced page load time by approximately **40%**, and lowered cloud infrastructure costs by approximately **50%** through performance and infrastructure optimization. Comfortable owning features end-to-end, from API design to deployment.

EXPERIENCE

MERN Stack Developer

June 2025 – June 2026

Metaarth Finserve PVT LTD, Noida

- Built and deployed **Gawriganga**, a production-grade e-commerce platform from the ground up, serving **15,000+ visitors**, and owned architecture across customer, admin, and payment systems.
- Designed and developed RESTful APIs for authentication, inventory, order, and payment modules; integrated Easebuzz, Shiprocket, and AWS services.
- Reduced initial page load time by approximately **40%** through lazy loading, image optimization, API performance tuning, and CDN caching.
- Reduced AWS infrastructure costs by approximately **50%** by optimizing cloud resources and architecture without impacting application availability.

PROJECTS

WRITTEX — Writing Platform

- Built a full-stack note-taking and writing platform, currently used by **100+ users**, with ongoing enhancements toward a production-ready writing platform.
- Designed a MongoDB and Node.js data model using nested JSON to efficiently store and manage hierarchical note structures.
- Implemented a stack-based undo system by storing edit snapshots in localStorage, enabling sequential rollback of user changes.
- Built automatic crash recovery by restoring unsaved notes from the latest snapshot after unexpected browser closure.
- Integrated Supabase authentication and real-time data synchronization, and developed a responsive UI using React.js, Tailwind CSS, Radix UI, and Framer Motion.

GITWORK – AI-Powered Developer Collaboration Platform

- Architected an AI engineering platform using **Next.js**, **tRPC**, **Prisma**, and **Gemini** that indexes live GitHub repositories for grounded codebase Q&A.
- Built a **Retrieval-Augmented Generation (RAG)** pipeline over repository embeddings, enabling responses grounded in real source files instead of hallucinated answers.
- Engineered an asynchronous pipeline that transforms meeting audio into structured issue drafts, streamlining engineering workflows.
- Delivered AI-powered commit timelines and PR risk digests, helping teams prioritize code reviews without manually analyzing large diffs.

SKILLS

Languages	JavaScript, HTML, CSS
Frontend	React.js, Next.js, Tailwind CSS, shadcn/ui, Framer Motion, Radix UI
Backend	Node.js, Express.js, REST APIs
Databases	MongoDB, PostgreSQL, Supabase
Tools	Git, GitHub, CI/CD, Docker, AWS, Nginx, Vercel, Cloudflare, Clerk
Other	Cursor, Stripe, Easebuzz, Shiprocket

EDUCATION

Bachelor of Computer Applications

Management Education and Research Institute, IP University (CGPA: 7.7/10)

2025
